4.1a Environmental Life Cycle Assessment (life cycle impacts)	Conformance	The Amcor Group evaluates the environmental Life Cycle Assessment (LCA) information for all product lines for which Aluminium is considered and used. The methodology has been certified by the Carbon Trust and is compliant with PAS 2050:2011, Greenhouse Gas Protocol – Product Life Cycle Accounting and Reporting Standard (2011), ISO 14044:2006, ISO 14046:2014, ISO/TS 14067:2018, and the Product Carbon Footprint Protocol (Parts 1 & 2). Products registered in ASSET are reviewed and approved annually by the Sustainability Manager.
4.1b Environmental Life Cycle Assessment (cradle to gate)	Conformance	The Amcor Group has various channels for regularly providing information to customers about its cradle-to-gate LCA information. The Entity presents LCA information directly in meetings with its clients to explore sustainability options. Automatic reports from Amcor's LCA tool can be generated and shared with customers. There is a function on the Amcor website to request an ASSET assessment: https://www.amcor.com/products/services/life-cycle-assessment
4.1c Environmental Life Cycle Assessment (public communication)	Conformance	The benefits of using LCAs are outlined on the Amcor corporate website. 4.2 Product design	Conformance	<p>The Amcor Group integrates into product design the enhancement of the sustainability aspects of end-products via the Innovation Management System software (IMS) and specifically the 'TaskRay' tool, which evaluates sustainability requirements from the first stage of a project and uses information from the LCA tool ASSET. The system is managed centrally by Amcor's Research and Development (R&D) department. Amcor has objectives to continuously enhance the sustainability of its products and has pledged to develop all packaging products to be recyclable or reusable by 2025. Further details on the 'Recycle-Ready' pledge are available in the Sustainability Report, pages 21-23: https://www.amcor.com/sustainability-report</p>

The Entity has undertaken a detailed mapping of the processes where Aluminium waste occurs, operates a process scrap recycling plan, and has identified in its procedures its waste streams and associated disposal methods. A continuous improvement project has been implemented and has identified areas to reduce the amount of scrap generated. The minimisation of Aluminium Process Scrap is a key performance indicator (KPI) that is monitored at local and global levels and is integrated into the site's strategic Roadmap for 2020-2025. Monitoring of performance against the scrap reduction objective is undertaken monthly.</p>
4.3b Aluminium Process Scrap (alloy separation)	Conformance	<p>The alloy types manufactured by the Entity are very similar in their composition, and therefore there is no need to separate these alloys for recycling.</p>
